Internship availability (Co-Op): from Jan 4, 2027 — 3 to 6 months (flexible with dates)

Summary

Fourth-year Computer Engineering student at Mae Fah Luang University with hands-on experience across machine learning, computer vision, web and mobile development, and hardware prototyping. Teaching Assistant supporting programming, networking, and data-analytics labs since 2025. Seeking a technical engineering internship.

Education

Mae Fah Luang University — Chiang Rai, Thailand
B.Eng. in Computer Engineering — *Aug 2023 – Aug 2027 (expected)*

- GPA: **3.98/4.00** | TOEIC Listening & Reading: **980/990** (CEFR C1, Aug 2026)
- **Relevant coursework:** Machine Learning; Computer Vision and Visual Analytics; Big Data Management and Analytics; Data Communications and Networks; Web Application Development; Mobile Application Development; Data Structures and Algorithms; Embedded Systems and IoT

Experience

Teaching Assistant (Laboratory) — Chiang Rai, Thailand
Mae Fah Luang University — *Aug 2025 – Present*

- Supported labs across five courses in programming, networking, digital logic, and data analytics.
- Troubleshot software and hardware issues in 10+ lab sessions per semester, 50+ students each.
- Graded coursework and helped instructors design rubrics and assess final group projects.

Selected Projects

Real-Time Smart Road Accident Risk Warning System — Senior Project, Jan 2026 – Present
Project Manager & Primary Developer — Python, YOLO, LightGBM, OpenCV, Docker

- Led a three-member team developing a roadside accident-risk warning prototype using computer vision and machine learning.
- Prepared approximately 140,000 historical accident records and trained and evaluated multiclass classification models, achieving 0.757 test macro recall with LightGBM.
- Integrated the trained model with YOLO-based traffic detection and implemented road-region and pedestrian filtering to improve feature extraction.

Aviation Flight Delay Analytics and Alert System — Mar – May 2026
Python, PySpark, Spark MLlib, Kafka

- Trained and evaluated flight-delay classification models using PySpark and Spark MLlib on approximately 450,000 historical flight records.
- Collaborated on a Kafka-based streaming prediction system, implementing and testing its real-time inference functionality.

University Room Reservation System (Web & Mobile) — 2025
Node.js, Express, MySQL, Flutter | Web repo · Mobile repo

- One of the primary developers of a room-booking web app with reservation and role-based approval workflows.
- Extended the system into a Flutter mobile app; tested API integration and booking flows on iOS simulator.

Ka-Naung Pet Dog – Robotic Hardware Prototype — Jul 2026 – Present

- Tested MG995 servos, assessed power and battery requirements, and helped with soldering and PCB planning.

Technical Skills

- **Programming:** Python, JavaScript, Dart, SQL, HTML/CSS; also studied Java, C#, MATLAB
- **Machine learning & data:** LightGBM, scikit-learn, YOLO, OpenCV, PySpark, Spark MLlib, Kafka
- **Software development:** Node.js, Express, Flutter, MySQL, REST APIs, Docker, Git
- **Hardware:** Soldering, servo motor testing, power-budget assessment, microcontroller basics

Additional Information

- **International exchange:** Deep Learning and AI for Images, Universitas Brawijaya (Indonesia), Sep 2026
- **Online courses:** Getting Started with AWS Machine Learning (AWS); HPE Aruba Networking Basics (HPE Aruba)
- **Languages:** Burmese (native), English (TOEIC 980/990), Thai (beginner), Japanese (N5 level)
